Low Distortion, High Speed Rail-to-Rail Input/Output Amplifier

Known Good Die

AD8028-KGD-CHIP

FEATURES

High speed
190 MHz, −3 dB bandwidth (G = +1)
100 V/µs slew rate
Low distortion
120 dBc @ 1 MHz SFDR
80 dBc @ 5 MHz SFDR
Selectable input crossover threshold
Low noise
4.3 nV/√Hz
1.6 pA/√Hz
Low offset voltage: 900 µV max
Low power: 6.5 mA/amplifier supply current
Disable mode
Wide supply range: 2.7 V to 12 V
Known good die (KGD): these die are fully guaranteed to data sheet specifications

APPLICATIONS

Filters
ADC drivers
Level shifting
Buffering
Professional video
Low voltage instrumentation

GENERAL DESCRIPTION

The AD8028-KGD-CHIP[1] is a high speed amplifier with rail-to-rail input and output that operates on low supply voltages and is optimized for high performance and wide dynamic signal range. The AD8028-KGD-CHIP has low noise (4.3 nV/√Hz, 1.6 pA/√Hz) and low distortion (120 dBc at 1 MHz). In applications that use a fraction of or the entire input dynamic range and require low distortion, the AD8028-KGD-CHIP is an ideal choice.

Many rail-to-rail input amplifiers have an input stage that switches from one differential pair to another as the input signal crosses a threshold voltage, which causes distortion. The AD8028-KGD-CHIP has a unique feature that allows the user to select the input crossover threshold voltage through the SELECT pin. This feature controls the voltage at which the complementary transistor input pairs switch. The AD8028-KGD-CHIP also has intrinsically low crossover distortion. With its wide supply voltage range (2.7 V to 12 V) and wide bandwidth (190 MHz), the AD8028-KGD-CHIP amplifier is designed to work in a variety of applications where speed and performance are needed on low supply voltages. The AD8028-KGD-CHIP has a disable mode that is controlled via the SELECT pin.

The AD8028-KGD-CHIP is rated to work over the industrial temperature range of −40°C to +125°C.

Additional application and technical information can be found in the AD8028 data sheet.

ABSOLUTE MAXIMUM RATINGS

Table 4.

Parameter	Rating
Supply Voltage	12.6 V
Common-Mode Input Voltage	$\pm V_S \pm 0.5$ V
Differential Input Voltage	±1.8 V
Storage Temperature	–65°C to +125°C
Operating Temperature Range	–40°C to +125°C
Junction Temperature	150°C

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

PAD CONFIGURATION AND FUNCTION DESCRIPTIONS
