STK5Q4U352J-E

Advance Information
8A/600V Integrated Power Module in Compact DIP package

The STK5Q4U352J-E is a fully-integrated inverter power stage consisting of a high-voltage driver, six IGBT's and a thermistor, suitable for driving permanent magnet synchronous (PMSM) motors, brushless-DC (BLDC) motors and AC asynchronous motors. The IGBT's are configured in a 3-phase bridge with separate emitter connections for the lower legs for maximum flexibility in the choice of control algorithm.
The power stage has a full range of protection functions including cross-conduction protection, external shutdown and under-voltage lockout functions. An internal comparator and reference connected to the over-current protection circuit allows the designer to set the over-current protection level.

Features

- Three-phase 8A/600V IGBT module with integrated drivers
- Typical values : $V_{CE(SAT)}$ = 1.4V, V_F = 1.8V, E_{SW} = 330μJ
- Compact 29.6mm × 18.2mm dual in-line package
- Cross-conduction protection
- Adjustable over-current protection level
- Integrated bootstrap diodes and resistors
- Enable pin
- Thermistor

Typical Applications

- Industrial Pumps
- Industrial Fans
- Industrial Automation
- Home Appliances

PIN FUNCTION DESCRIPTION

Pin	Name	Description
1	GND	Negative Main Supply
2	VDD	+15V Main Supply
3	HINU	Logic Input High Side Gate Driver - Phase U
4	HINV	Logic Input High Side Gate Driver - Phase V
5	HINW	Logic Input High Side Gate Driver - Phase W
6	LINU	Logic Input Low Side Gate Driver - Phase U
7	LINV	Logic Input Low Side Gate Driver - Phase V
8	LINW	Logic Input Low Side Gate Driver - Phase W
9	FAULT	Fault output
10	ITRIP	Current protection pin
11	ENABLE	Enable input
12	RCIN	R,C connection terminal for setting FAULT clear time
13	TH1	Thermistor output 1
14	TH2	Thermistor output 2
17	NU	Low Side Emitter Connection - Phase U
18	NV	Low Side Emitter Connection - Phase V
19	NW	Low Side Emitter Connection - Phase W
20	W	W phase output. Internally connected to W phase high side driver ground
22	VBW	High Side Floating Supply Voltage for W phase
26	V	V phase output. Internally connected to V phase high side driver ground
28	VBV	High Side Floating Supply voltage for V phase
32	U	U phase output. Internally connected to U phase high side driver ground
34	VBU	High Side Floating Supply voltage for U phase
38	VP	Positive Bus Input Voltage

Note: Pins 15, 16, 21, 23, 24, 25, 27, 29, 30, 31, 33, 35, 36, 37 are not present

ABSOLUTE MAXIMUM RATINGS (Notes 1,2)

Rating	Symbol	Conditions	Value	Unit
Supply voltage	V_{CC}	VP to NU, NV, NW, surge < 500V (Note 3)	450	V
Collector-emitter voltage	V_{CE} max	VP to U, V, W ; U to NU ; V to NV ; W to NW	600	V
Output current	Io	VP, U, V, W, NU, NV, NW terminal current	±8	A
		VP, U, V, W, NU, NV, NW terminal current, Tc=100°C	±4	A
Output peak current	Iop	VP, U, V, W, NU, NV, NW terminal current, pulse width 1ms	±16	A
Gate driver supply voltages	V_{DD},V_{BS}	VBU to U, VBV to V, VBW to W, V_{DD} to GND (Note 4)	−0.3 to +20.0	V
Input signal voltage	V_{IN}	HINU, HINV, HINW, LINU, LINV, LINW	−0.3 to V_{DD}	V
FAULT terminal voltage	VFAULT	FAULT terminal	−0.3 to V_{DD}	V
RCIN terminal voltage	VRCIN	RCIN terminal	−0.3 to V_{DD}	V
ITRIP terminal voltage	VITRIP	ITRIP terminal	−0.3 to +10.0	V
ENABLE terminal voltage	VENABLE	ENABLE terminal	−0.3 to V_{DD}	V
Maximum power dissipation	Pd	IGBT per 1 channel	31	W
Junction temperature	Tj	IGBT, Gate driver IC	150	°C
Storage temperature	Tstg		−40 to +125	°C
Operating case temperature	Tc	IPM case temperature	−20 to +100	°C
Package mounting torque		Case mounting screw	0.6	Nm
Isolation voltage	Vis	50Hz sine wave AC 1 minute (Note 5)	2000	Vrms

1. Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.
2. Refer to ELECTRICAL CHARACTERISTICS, RECOMMENDED OPERATING RANGES and/or APPLICATION INFORMATION for Safe Operating parameters.
3. This surge voltage developed by the switching operation due to the wiring inductance between VP and NU,NV,NW terminals.
4. V_{BS}=VBU to U, VBV to V, VBW to W
5. Test conditions : AC2500V, 1 s

RECOMMENDED OPERATING RANGES (Note 6)

Rating	Symbol		Min	Typ	Max	Unit
Supply voltage	V_{CC}	VP to NU, NV, NW	0	280	400	V
Gate driver supply voltage	V_{BS}	VBU to U, VBV to V, VBW to W	12.5	15	17.5	V
	V_{DD}	V_{DD} to GND (Note 4)	13.5	15	16.5	
ON-state input voltage	V_{IN}(ON)	HINU, HINV, HINW, LINU, LINV, LINW	3.0		5.0	V
OFF-state input voltage	V_{IN}(OFF)		0		0.3	
PWM frequency	fPWM		1		20	kHz
Dead time	DT	Turn-off to turn-on (external)	1			μs
Allowable input pulse width	PWIN	ON and OFF	1			μs
Package mounting torque		'M3' type screw	0.4		0.6	Nm

6. Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond the Recommended Operating Ranges limits may affect device reliability.

ELECTRICAL CHARACTERISTICS

at Tc=25°C, VDS=15V,VDD=15V

Parameter	Test Conditions	Symbol	Min	Typ	Max	Unit
Power output section						
Collector-emitter leakage current	V_{CE}=600V	I_{CE}	-	-	100	μA

APPLICATIONS INFORMATION

Input / Output Timing Chart

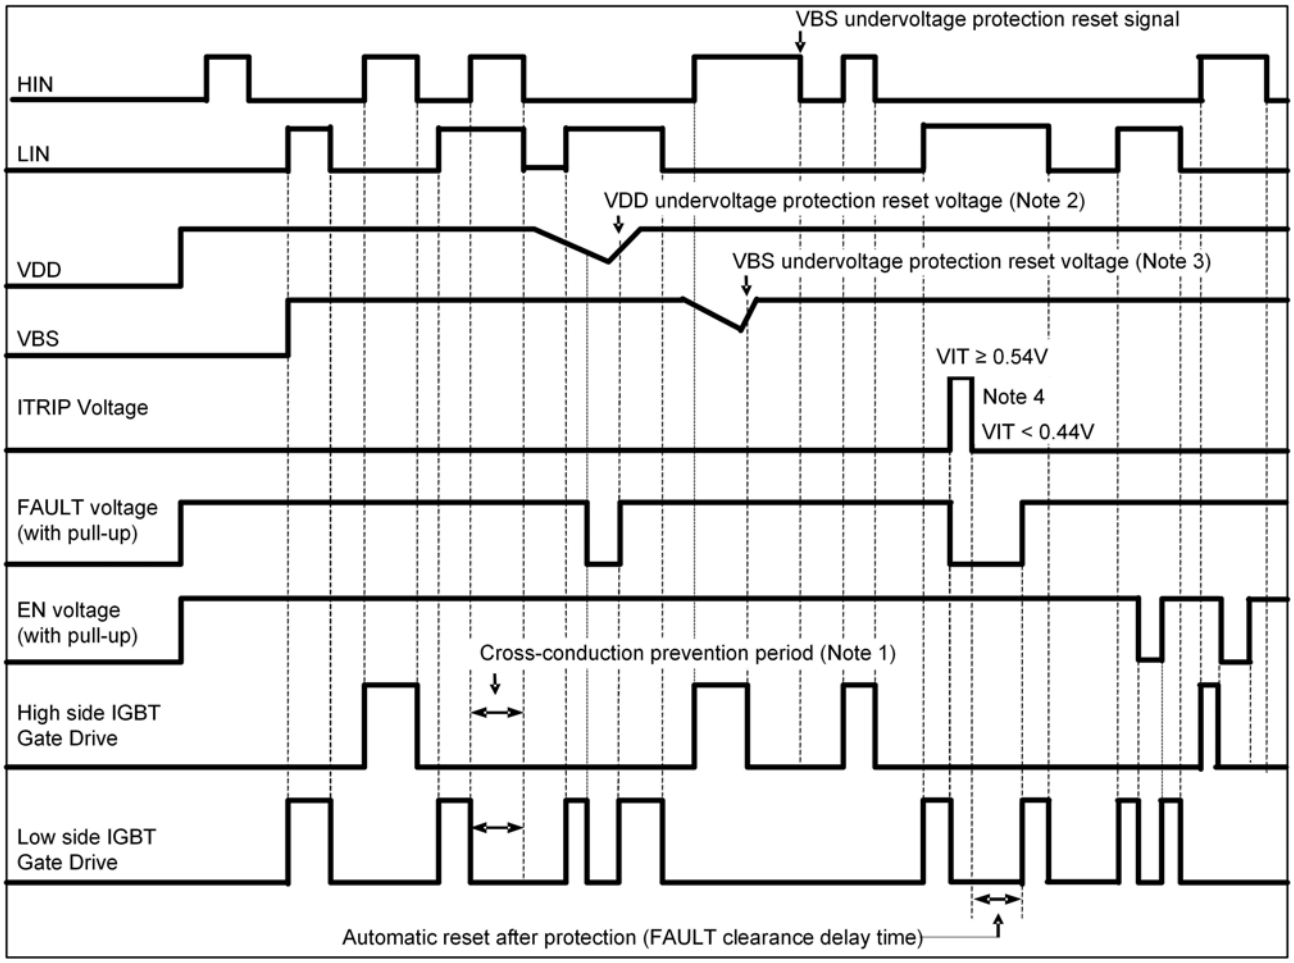

Figure 12. Input/Output Timing Chart

Notes

1. This section of the timing diagram shows the effect of cross-conduction prevention.
2. This section of the timing diagram shows that when the voltage on VDD decreases sufficiently all gate output signals will go low, switching off all six IGBTs. When the voltage on VDD rises sufficiently, normal operation will resume.
3. This section shows that when the bootstrap voltage VBS drops, the corresponding high side output (U or V or W) is switched off. When VBS rises sufficiently, normal operation will resume.
4. This section shows that when the voltage on ITRIP exceeds the threshold, all IGBT's are turned off. Normal operation resumes later after the over-current condition is removed.
5. After VDD has risen above the threshold to enable normal operation, the driver waits to receive an input signal on the LIN input before enabling the driver for the HIN signal.

Input / Output Logic Table

INPUT				OUTPUT			
HIN	**LIN**	**Itrip**	**Enable**	**High side IGBT**	**Low side IGBT**	**U,V,W**	**FAULT**
H	L	L	H	ON (Note 5)	OFF	VP	OFF
L	H	L	H	OFF	ON	NU,NV,NW	OFF
L	L	L	H	OFF	OFF	High Impedance	OFF
H	H	L	H	OFF	OFF	High Impedance	OFF
X	X	H	H	OFF	OFF	High Impedance	ON
X	X	X	L	OFF	OFF	High Impedance	OFF

Thermistor characteristics

Parameter	Symbol	Condition	Min	Typ	Max	Unit
Resistance	R_{25}	Tc=25℃	99	100	101	kΩ
	R_{100}	Tc=100℃	5.18	5.38	5.60	kΩ
B-Constant (25 to 50℃)	B		4208	4250	4293	K
Temperature Range			−40		+125	℃

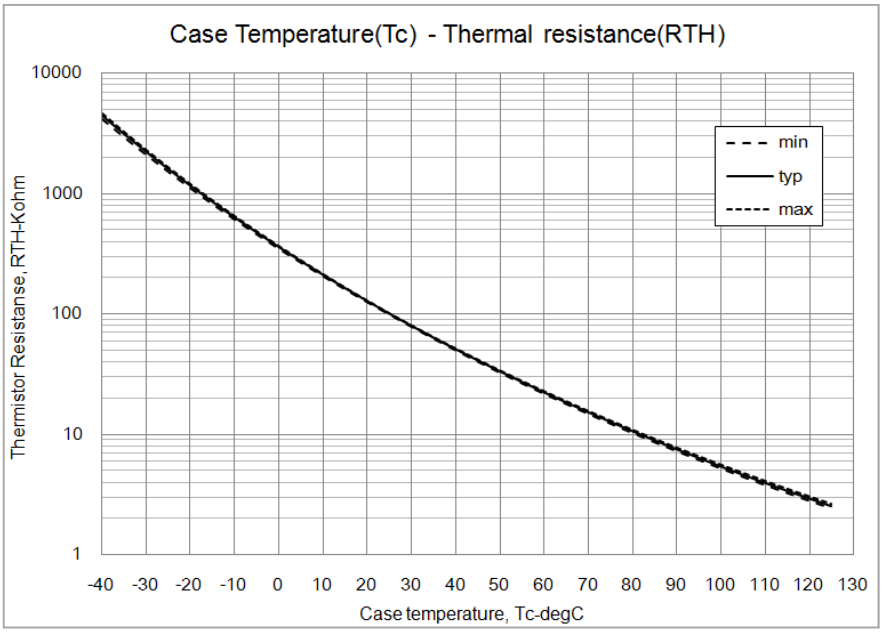

Figure 13 Thermistor Resistance versus Case Temperature

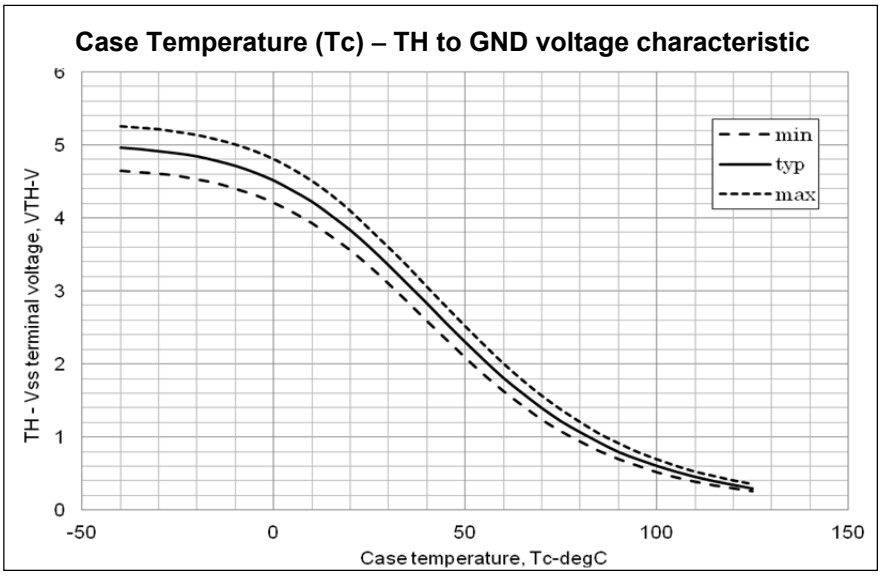

Figure 16 Thermistor Voltage versus Case Temperature
Conditions: RTH=39kΩ, pull-up voltage 5.0V (see Figure 2)

Fault output
The FAULT output is an open drain output requiring a pull-up resistor. If the pull-up voltage is 5V, use a pull-up resistor with a value of 6.8kΩ or higher. If the pull-up voltage is 15V, use a pull-up resistor with a value of 20kΩ or higher. The FAULT output is triggered if there is a VDD undervoltage or an overcurrent condition.

Undervoltage lockout protection
If VDD goes below the VDD supply undervoltage lockout falling threshold, the FAULT output is switched on. The FAULT output stays on until VDD rises above the VDD supply undervoltage lockout rising threshold. After VDD has risen above the threshold to enable normal operation, the driver waits to receive an input signal on the LIN input before enabling the driver for the HIN signal.

Overcurrent protection
An over-current condition is detected if the voltage on the ITRIP pin is larger than the reference voltage. There is a blanking time of typically 350ns to improve noise immunity. After a shutdown propagation delay of typically 1.1 us, the FAULT output is switched on. The FAULT output is held on for a time determined by the resistor and capacitor connected to the RCIN pin. If RCLR=2MΩ and CCLR=1nF, the FAULT output is switched on for 1.65ms (typical).

The over-current protection threshold should be set to be equal or lower to 2 times the module rated current (IO).

An additional fuse is recommended to protect against system level or abnormal over-current fault conditions.

Capacitors on High Voltage and VDD supplies
Both the high voltage and VDD supplies require an electrolytic capacitor and an additional high frequency capacitor.

Enable pin
The ENABLE terminal pin is used to enable or shut down the built-in driver. If the voltage on the ENABLE pin rises above the ENABLE ON-state voltage, the output drivers are enabled. If the voltage on the ENABLE pin falls below the ENABLE OFF-state voltage, the drivers are disabled.

Minimum input pulse width
When input pulse width is less than 1μs, an output may not react to the pulse. (Both ON signal and OFF signal)
Calculation of bootstrap capacitor value

The bootstrap capacitor value CB is calculated using the following approach. The following parameters influence the choice of bootstrap capacitor:

- VBS: Bootstrap power supply.
  15V is recommended.
- QG: Total gate charge of IGBT at VBS=15V.
  45nC
- UVLO: Falling threshold for UVLO.
  Specified as 12V.
- ID_{MAX}: High side drive consumption current.
  Specified as 0.4mA
- t_{ONMAX}: Maximum ON pulse width of high side IGBT.

Capacitance calculation formula:

$$CB = (QG + IDMAX * t_{ONMAX})/(VBS - UVLO)$$

CB is recommended to be approximately 3 times the value calculated above. The recommended value of CB is in the range of 1 to 47μF, however, the value needs to be verified prior to production. When not using the bootstrap circuit, each high side driver power supply requires an external independent power supply.

The internal bootstrap circuit uses a MOSFET. The turn on time of this MOSFET is synchronized with the turn on of the low side IGBT. The bootstrap capacitor is charged by turning on the low side IGBT.

If the low side IGBT is held on for a long period of time (more than one second for example), the bootstrap voltage on the high side MOSFET will slowly discharge.

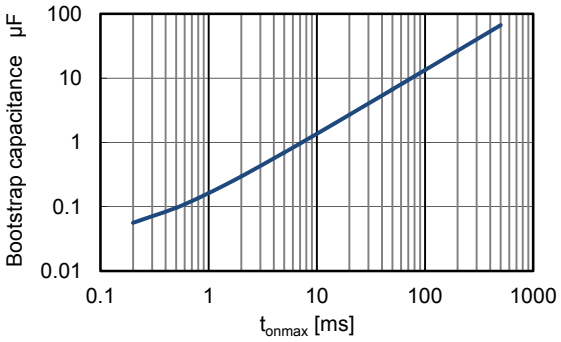

Figure 17: Bootstrap capacitance versus t_{onmax}

Mounting Instructions

Item	Recommended Condition
Pitch	26.0±0.1mm (Please refer to Package Outline Diagram)
Screw	Diameter : M3 Screw head types: pan head, truss head, binding head
Washer	Plane washer dimensions (Figure 14) D = 7mm, d = 3.2mm and t = 0.5mm JIS B 1256
Heat sink	Material: Aluminum or Copper Warpage (the surface that contacts IPM) : −50 to 50 μm Screw holes must be countersunk. No contamination on the heat sink surface that contacts IPM.
Torque	Temporary tightening : 50 to 60 % of final tightening on first screw Temporary tightening : 50 to 60 % of final tightening on second screw Final tightening : 0.4 to 0.6Nm on first screw Final tightening : 0.4 to 0.6Nm on second screw
Grease	Silicone grease. Thickness : 50 to 100 μm Uniformly apply silicon grease to whole back. Thermal foils are only recommended after careful evaluation. Thickness, stiffness and compressibility parameters have a strong influence on performance.

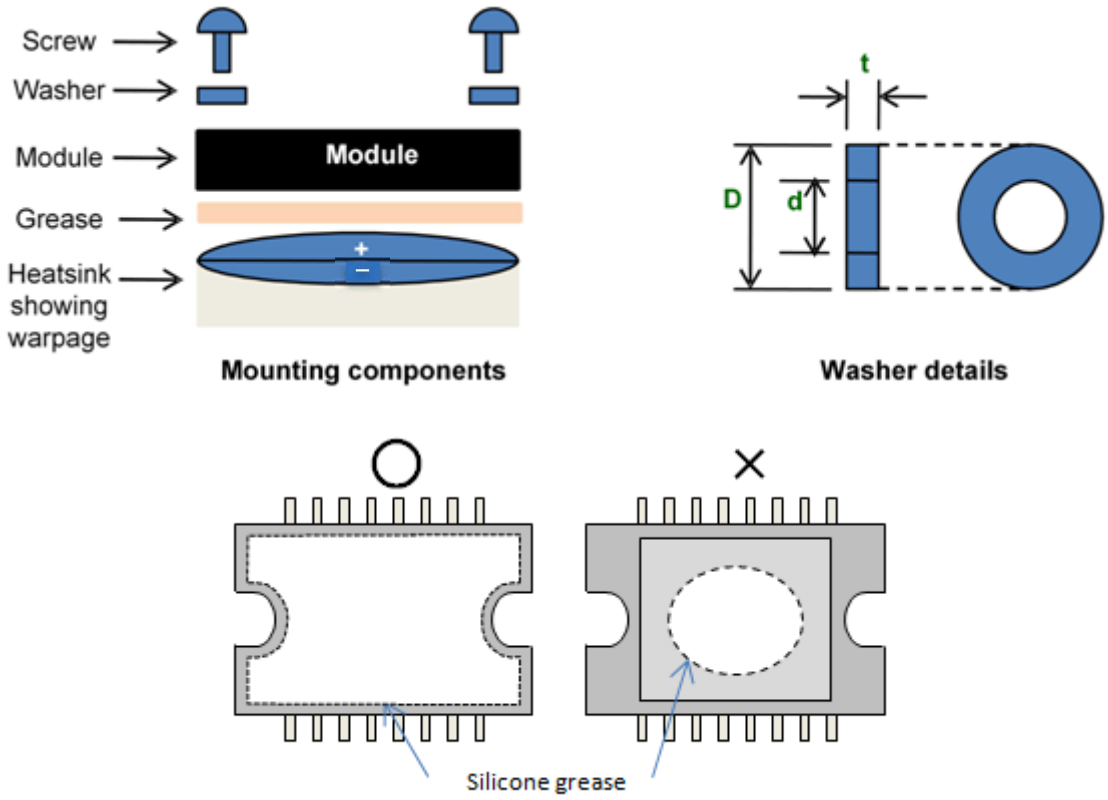

Figure 18: Module Mounting details: components; washer drawing; need for even spreading of thermal grease
